Experiment-11

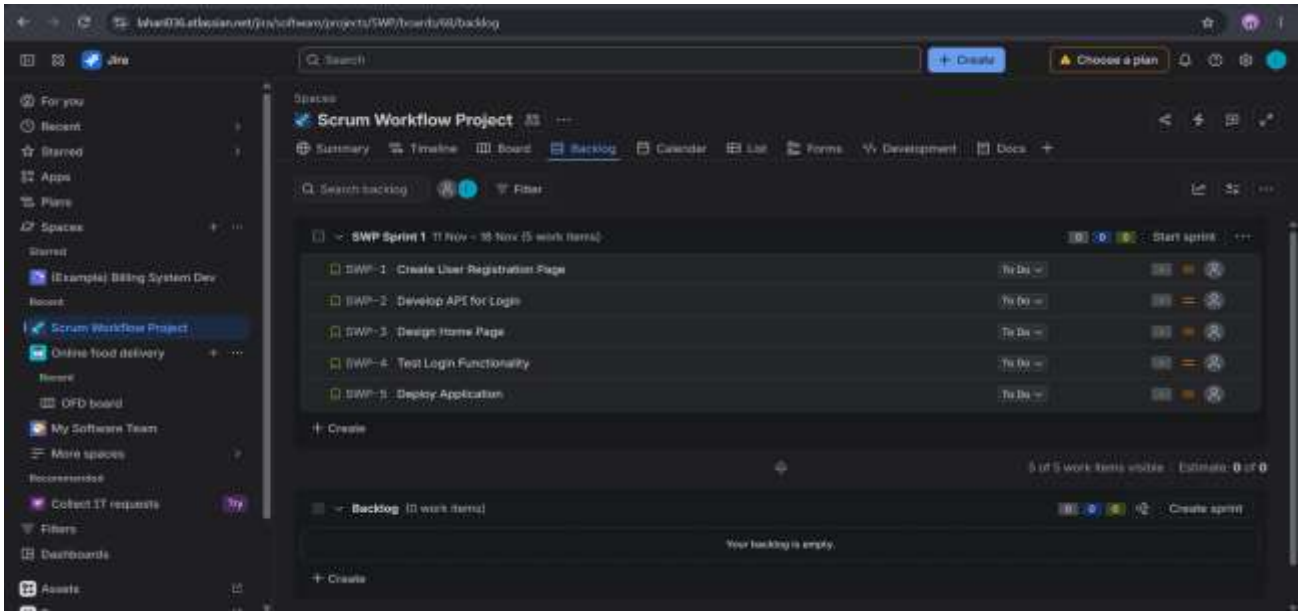

CREATING A SCRUM PROJECT WITH BACKLOG AND SPRINT IN JIRA

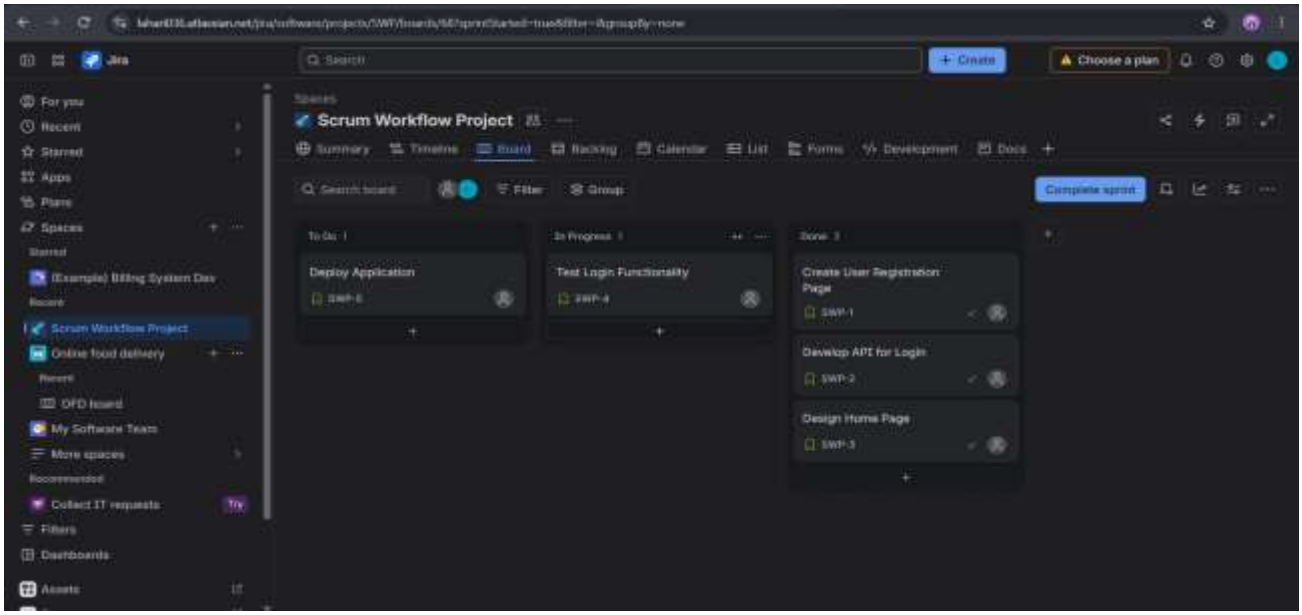

AIM

To create a Scrum project in Jira, add user stories to the product backlog, plan a sprint, start the sprint and track the work on the sprint board.

Procedure:

1. Open Jira and log in with your account.
2. Click on **Create Project** and select the **Scrum** project template.
3. Enter the project name and click **Create Project**.
4. Open the newly created Scrum project and navigate to the **Backlog** section.
5. Click **Create Issue** to add user stories or tasks to the product backlog.
6. Enter the task summary and description, then save the issue.
7. Add multiple tasks to the backlog based on project requirements.
8. Click **Create Sprint** to create a new sprint.
9. Drag the required backlog tasks into the sprint.
10. Click **Start Sprint**, provide the sprint name and duration, and start the sprint.
11. View the sprint tasks in the Active Sprint board and monitor their progress.

Result:

Successfully created a Scrum project in Jira, added tasks to the product backlog, created a sprint, and started the sprint to manage and track project activities using Agile methodology.
