Experiment-13

PRIORITIZING ONLINE LEARNING PLATFORM REQUIREMENTS USING MOSCOW AND KANO IN JIRA

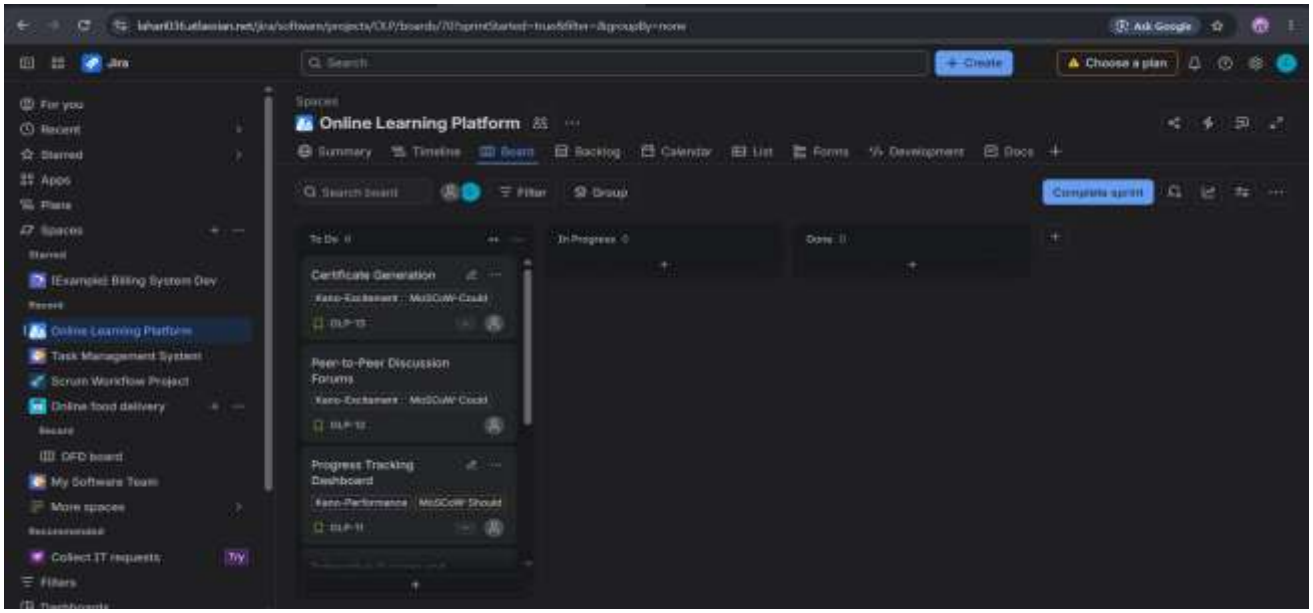

AIM

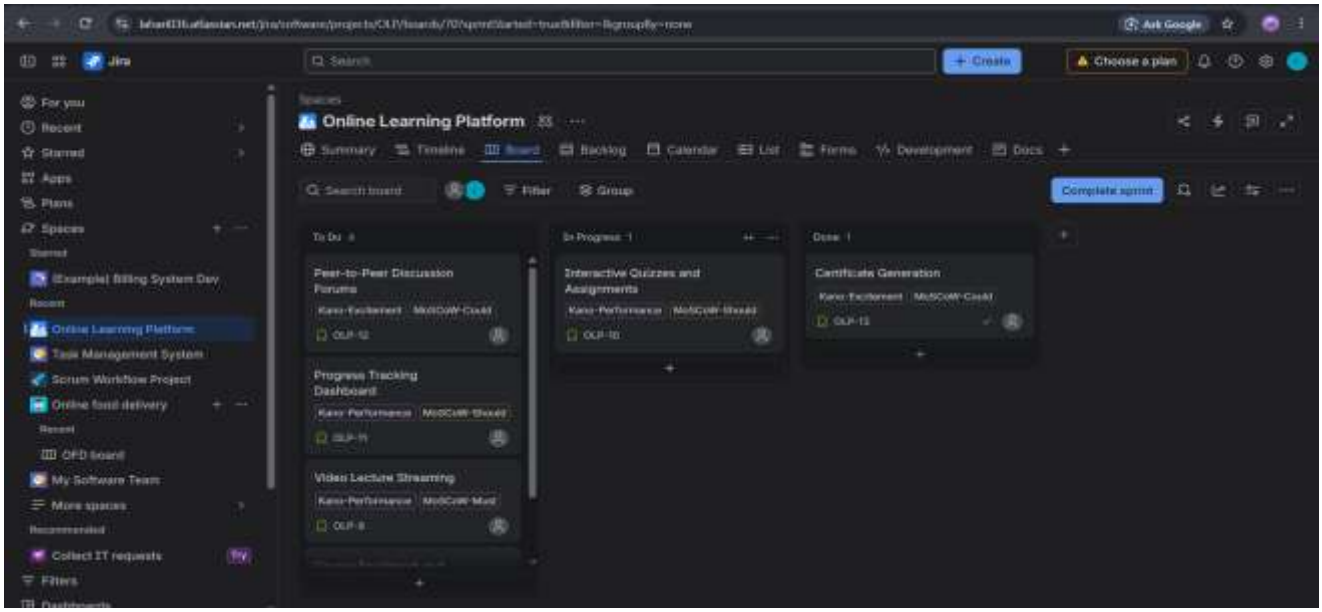

To categorize and prioritize the functional requirements of an Online Learning Platform in Jira using the MoSCoW and Kano techniques.

Procedure:

1. Open Jira and log in to your account.
2. Create a new project named **Online Learning Platform**.
3. Navigate to the Backlog or Issues section.
4. Create issues for the platform requirements:
    - User Registration and Login
    - Course Browsing and Enrollment
    - Video Lectures
    - Online Assessments and Quizzes
    - Progress Tracking
    - Certificates Generation
    - Course Recommendations
5. Apply the **MoSCoW prioritization** technique:
    - **Must Have:** User Login, Course Enrollment.
    - **Should Have:** Video Lectures, Online Assessments.
    - **Could Have:** Progress Tracking, Course Recommendations.
    - **Won't Have:** Certificates Generation (in the current version).
6. Apply the **Kano Model** to classify the requirements:
    - **Basic:** User Login and Course Enrollment.
    - **Performance:** Video Lectures and Progress Tracking.
    - **Excitement:** Course Recommendations and Certificates.
7. Add suitable priority labels to the Jira issues based on both techniques.

8. Review and save the prioritized requirements.

Result:

Successfully prioritized the Online Learning Platform requirements in Jira using MoSCoW and Kano models. The requirements were classified based on development importance and user satisfaction, helping the team plan and manage the project effectively.
