## Experiment-07

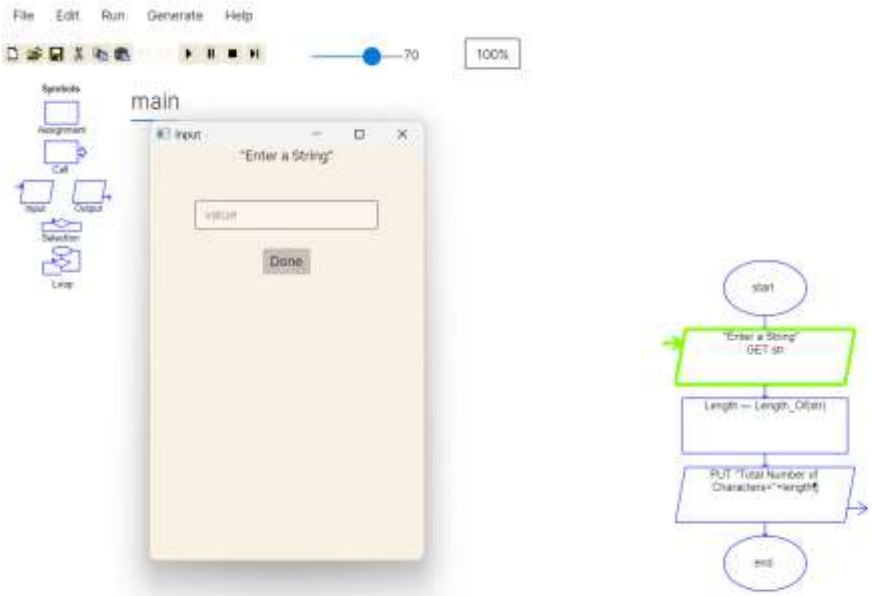

## Lexicographically Smallest String by Swapping Two Characters using RAPTOR

### Aim:

To develop a RAPTOR flowchart to find the lexicographically smallest string by swapping two characters.

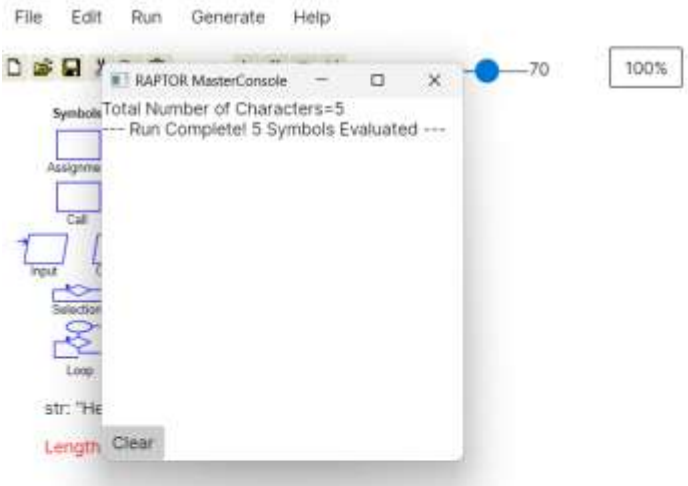

### Procedure:

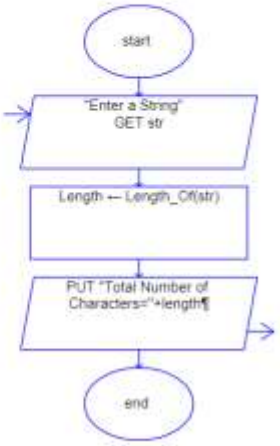

1. Start the RAPTOR program and read the input string.
2. Find the positions of characters in the string.
3. Compare the characters to identify a suitable swap.
4. Swap the two characters to obtain the smallest possible string.
5. Display the resulting string.
6. Stop the program.

ReRe

ZR

Result:

Thus, the RAPTOR flowchart was successfully developed to find the lexicographically smallest string by swapping two characters.
