Experiment-9

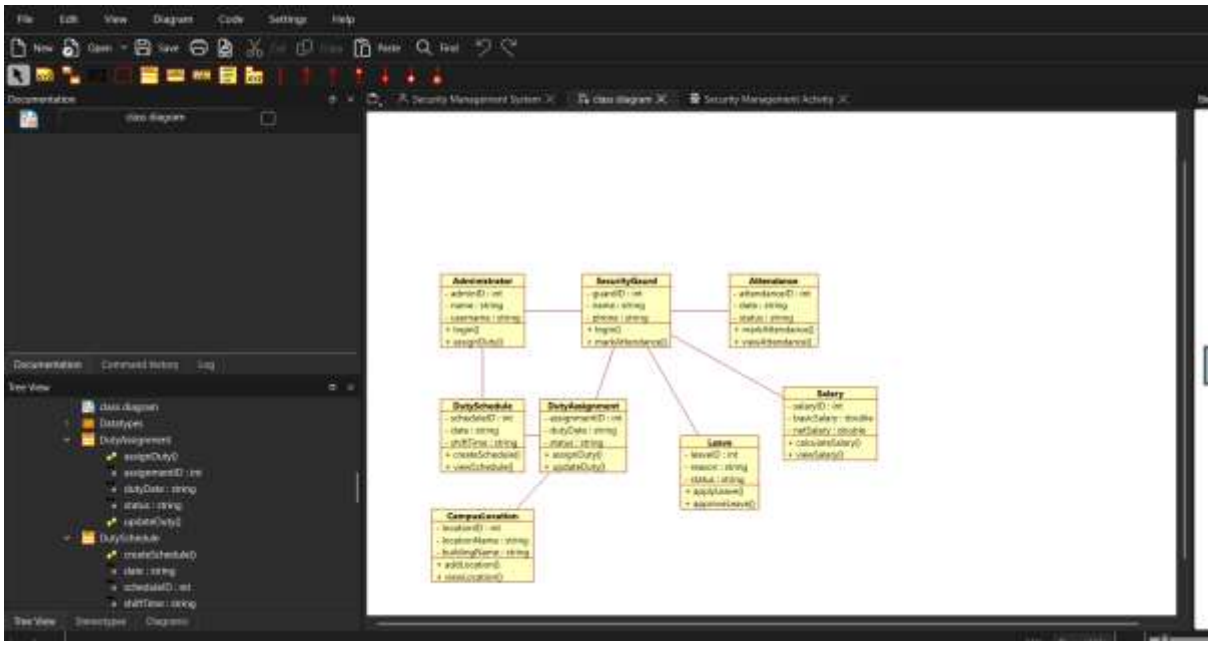

UML Diagrams for a College Security Management System

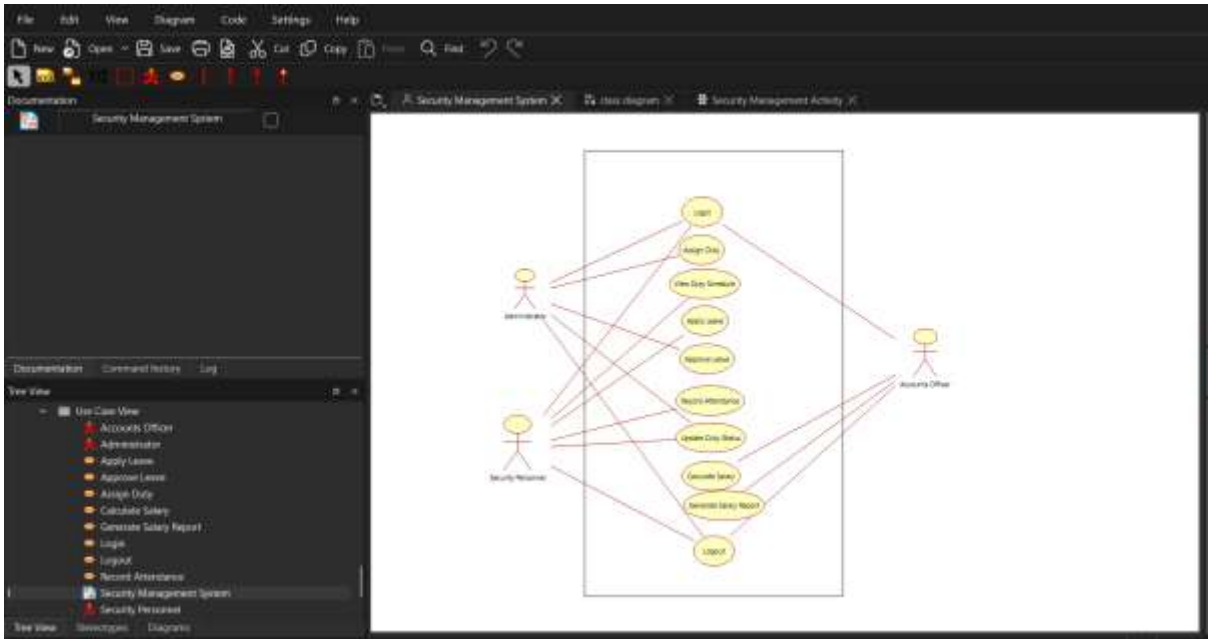

Aim:

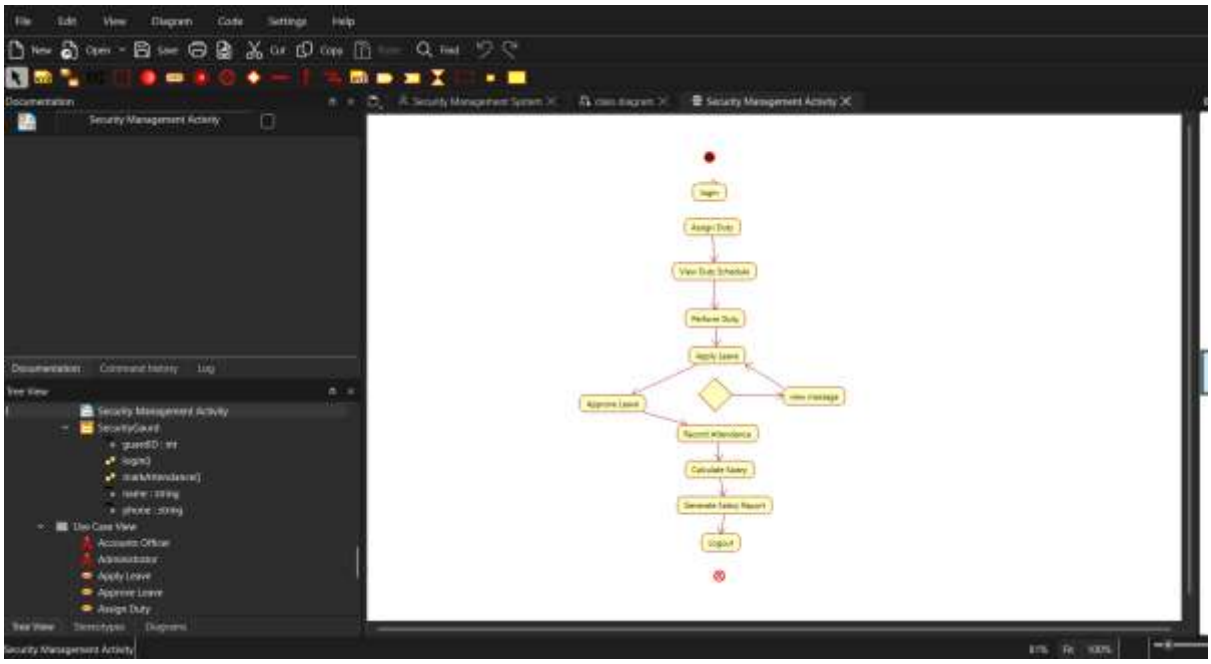

To design UML diagrams for a College Security Management System to represent its structure and working process.

Procedure:

1. Identify the actors and requirements of the security management system.
2. Draw the Use Case Diagram to show interactions between users and the system.
3. Draw the Class Diagram to represent classes, attributes and methods.
4. Draw the Activity Diagram to show the security monitoring process.
5. Verify and save all the UML diagrams.

Result:

Thus, the UML diagrams for the College Security Management System were successfully designed.
